11 agents. One job each.

Agents prepare; humans commit. Wolf and Quartermaster are the intended Floor seats. Workers record finishes in the database; Wolf relays actionable results.

Wolf	Coordinates, resolves blockers and arms only after Pass. Cannot approve plans or submit orders.
Quartermaster	Stages planned-limit broker instructions and reconciles fills. Human submits.
Architect	Builds the weekly draft, scores and reads lessons. Never approves its own plan.
Sentinel	Full approved-plan premarket refresh. Changes non-active levels and claims only.
Scout	Woken intraday tape and evidence. Entry, promote and stop-risk work; never arms.
Red Team	Attacks the thesis with fresh evidence: Pass / Wait / Fail. Code owns the numbers.
Coach	Grades immutable thesis revisions and overrides. Pilot results stay separate.
Cartographer	Reports multi-timeframe structure facts; does not make the trade decision.
Options	Owns options evidence, scripted pulls and the rate-limited provider queue.
Pulse	Structured news and public X evidence; sentiment alone is not a signal.
Archivist	Gated research ingest and archiving. No duplicate or invented evidence.

VIDEO INGEST IS A ROUTINE, NOT A TWELFTH DECISION ROLE.

Human-only: approve the plan, submit every live order, change capital/risk. Enable unattended schedules explicitly. No agent can cross these boundaries.

PUBLIC DESIGN / 2026-10-11 / CC BY 4.0

The rules before the order.

Current design: thesis attack, code-gated work and recorded decisions. This public pack excludes private plans, positions, trade levels, accounts, credentials and internal IDs.

---

01 / PREREGISTER

Write the observable thesis, invalidation and time window at BUILD/UPDATE. Never invent it at entry.

02 / CODE FIRST

Fresh tape and calendar/plan gates before a wake. Planned-limit R:R, stop, target and earnings math are code.

03 / CHALLENGE

Red Team supplies the strongest opposing case. Only Pass permits Wolf to arm. Wait and Fail both block it.

04 / HUMAN COMMITS

Quartermaster stages a reviewable instruction after the arm. The human reviews and submits every order.

05 / DURABLE EVENTS

Claim stable keys at sender and receiver. Bound definite retries. Reconcile unknown acceptance; never blindly replay.

06 / FRESH DATA

Reject tape older than 120 seconds. Provider failure is a code alert, no model wake. Quotes and chart frames have separate clocks.

07 / SHORT CONTEXT

Read shared core plus one role card. Load references only as needed. Quiet slots finish in code; no repeated Fail chatter.

08 / ORIGINAL REVISION

Preserve immutable decision snapshots. Grade matching outcomes, not the current card. Legacy unversioned evidence is excluded from accuracy.

09 / VERIFY ACTIVATION

A Git merge is not a backend deploy. Schema, receiver guards, functions and controlled smoke checks are separate steps.

TEACHING PACK, NOT A RUNNABLE TRADING SYSTEM.

Backend activation was not verified in this public sync. No token-saving percentage or trading return is claimed. Not financial advice. Full contract and editable diagrams are in the public repository.
