

11 agents. One job each. Nobody else can fire.

The roster behind “I Gave 11 AI Agents My Trading Desk. None of Them Can Place a Trade.” Six Floor seats share a room; five workers are dispatched 1:1. Everything routes through a chief of staff. The human keeps the trigger.

HUMAN GATES

The human approves the weekly plan, fires every live order, and owns capital and risk. No agent can do any of the three.

THE FLOOR • SHARED ROOM

Wolf CHIEF OF STAFF

Routes work, owns handoffs, escalates. The only agent that may write “armed”, and only after a Red Team Pass.

CAN'T Approve a plan or place an order

Sentinel MORNING ANALYST

Premarket full-intel refresh with clear entry, stop and target levels. May add new names.

CAN'T Run unless the week's plan is approved

Scout FLOOR RUNNER

Checks the tape hourly in stages, and wakes within 5 min when price hits an entry. Entries go to Wolf, not Red Team.

CAN'T Arm a setup or place an order

Quartermaster EXECUTION DESK

Stages sized draft orders at the broker after a Pass, and reconciles fills.

CAN'T Send a live order

Cartographer TECHNICAL ANALYST

Weekly, daily and 1H structure: higher lows for longs, lower highs for shorts.

CAN'T Make trade calls or give options opinions

Options DERIVATIVES ANALYST

Expected-move bands, gamma regime and flow, on its own rate-limited queue.

CAN'T Exceed the data rate budget it owns

WORKERS • DISPATCHED 1:1

Architect STRATEGIST

Builds next week's plan from a full scan, reading past lessons first.

CAN'T Approve its own plan

Red Team RISK & COMPLIANCE

Tries to kill every setup before it goes live. Pass or Fail, nothing in between. A Fail blocks everything downstream.

CAN'T Return “conditional”

Coach PERFORMANCE COACH

Grades every trade against its locked prediction. Misses become lessons.

CAN'T Edit a prediction after it's locked

Pulse MARKET INTEL

Turns the sharpest X accounts on the week's names into structured context.

CAN'T Count vibes as signal

Archivist LIBRARIAN

Ingests research packs every morning, and deletes old files when new ones land.

CAN'T Leave orphaned or duplicate files

Every agent

Posts a one-line finish to the Floor:

`[Agent] [mode] status • deltas • blocker`

Agents prepare. Humans commit.

The hard rules all 11 agents follow. Breaking one is a blocker, not a style note.

01 · THREE DECISIONS STAY HUMAN

GATE 01

Approve the weekly plan

Agents can build, research and score it.
Can't approve it. No approval, no premarket run.

GATE 02

Fire a live order

Agents can arm after a Pass and stage a sized draft.
Can't send it. Ever.

GATE 03

Change capital or risk

Agents can read the limits and size inside them.
Can't touch sizing, max risk or the circuit breaker.

02 · THE ARM PATH: WATCHING → ARMED

01 DETECT

Scout / Sentinel

Arm condition met.
Reports it to Wolf,
never arms.

02 CHECK

Wolf

Lessons read.
Prediction locked on record.

03 CHALLENGE

Red Team

Pass or Fail. Fail =
nothing moves.

04 ARM · 05 STAGE

Wolf → QM

Writes armed on a
Pass. Draft order
staged.

06 FIRE

Human

The final tap is the
human's.

03 · KILL GATES (NO SCORING AROUND THEM)

- Reward-to-risk to first target below 2:1
- The week's game plan forbids the direction
- Earnings or event clash
- Red Team returns Fail

04 · THE PREDICTION GETS LOCKED FIRST

- Concrete expected outcome written before entry
- Frozen in the database once written
- Coach grades HIT / MISS / PARTIAL / VOID
- Misses become lessons, read before every plan and verdict

05 · COMMUNICATION & DATA

- Every arm condition is an observable event, e.g. "4H close above 33.75"
- No silent finishes: one Floor line per agent run
- One phone summary per run, with delivery confirmed
- The database is the system of record. Failures are logged loudly.

06 · NO AGENT WILL EVER

- Place, modify or cancel a live order
- Approve a weekly plan
- Arm without a Red Team Pass
- Edit a locked prediction or move an open position's levels
- Write a prediction after price reaches entry
